REASONS FOR ALLOWANCE

The following is an examiner's statement of reasons for allowance: the prior art neither discloses nor makes obvious a method of starting a gas turbine engine where the engine is rotated at an increasing speed as a function of time to accelerate the engine and fuel is injected into the combustor at a varying rate during the acceleration of the engine until the engine is lighted-off as set forth in the claims and then continuously injecting fuel to accelerate the engine to a self-sustaining condition. Upon further consideration of Falke et al and the applicant's arguments at pages 6 and the top of page 7 the examiner agrees that the material of claim 7 is allowable. In particular the examiner notes Falke et al at column 4 lines 19-30 which clearly set forth that the engine is accelerate to a specified speed by the starter motor, fuel is injected and ignited and then the ignition of the fuel results in additional acceleration of the engine. Thus Falke et al do not rotate the engine at an increasing speed to accelerate the engine and inject fuel into the combustor at a varying rate during the acceleration of the engine as set forth in the claims.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
